

INSTINCT i. KERS

INDISPUTABLE ICONIC INSTINCT

PLAYFUL RIDE

THE NARROW WAIST INCREASES THE TORSIONAL FLEX, WHICH MAKES THIS BOARD PLAYFUL AND PROGRESSIVE AT THE SAME TIME.

LESS WEIGHT

HEXAGONAL CORE WITH GRAPHENE IN TIP & TAIL REDUCE THE SWING WEIGHT AND INCREASE AGILITY.

ELECTRIC STABILIZERS

THE KINETIC ENERGY RECOVERY SYSTEM USES KINETIC ENERGY TO STIFFEN THE BOARD THROUGH PIEZO FIBERS WHEN RIDING FAST.

POWER DISTRIBUTION

OUR AWARDED FRAMEWALL EVENLY DISTRIBUTES POWER, ABSORBS SHOCKS AND PROTECTS THE BOARD.

FRAMEWALL

[1] EVEN POWER DISTRIBUTION

Comparing to traditional sidewall constructions, the unique Framewall evenly distributes applied edge pressure from tip to tail, while eliminating pressure peaks underneath the binding areas.

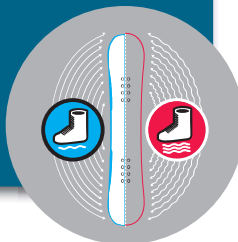

Better power distribution along the edges results in more balanced turns and improved edge grip without needing to invest higher efforts into riding.

vs.

[2] MICRO-SUSPENSION

While sidewalls are covered and therefore stiffened by different kind of laminates top and bottom, our Framewall is wider and only partly overlapping with the top layers of the board construction.

The Framewall's exposed top edges can flex more freely to the upside with the effect that disturbing vibrations and micro-shocks get filtered and leveled out.

INSTINCT

If you're looking for an all-mountain board packed with pop and responsiveness, then the INSTINCT i. KERS directional twin is for you. With the dual benefits of reactive camber and fun flat camber the board delivers enhanced control and response in all conditions. Weight was reduced by 200g by using our brand new Hexagonal Core material paired with Graphene.

ARCHITECT

The directional twin shape with added pop and support of basalt stringers makes the ARCHITECT a master draughtsman of the park and beyond. This mid-wide, responsive freestyle stick exudes flex, power and control enabling both men and women to not only dominate the park but also other terrains where a freestyler likes to roam.
