

### ANYTHING LYT

This is the ideal board for you if you already have gained some riding experience and are now looking for the “one for all” - both for carving and freestyle sessions. The new hybrid construction DCT 2.0 delivers four added contact points with the snow, paired with a longer effective backside edge. This assures a perfect position, resulting in optimized control in all conditions, which makes carving easy. At the same time, the ANYTHING is very playful and forgiving, as it features a soft torsional flex and reduced weight in tip and tail. Your advantage: more fun, for longer.

### DAYMAKER LYT

We improved the construction of our most versatile board in our line by decreasing the weight of this all-mountain virtuoso. The hybrid camber construction combines the playfulness of a rocker board with the control of a camber board. The flat middle section assures a smooth ride, the narrow waist adds torsional flex, making the board very dynamic and forgiving. By reducing the weight of the board, it is even more agile and will take less effort to turn, resulting in long-lasting fun on the mountain.

# DCT vs. DCT 2.0

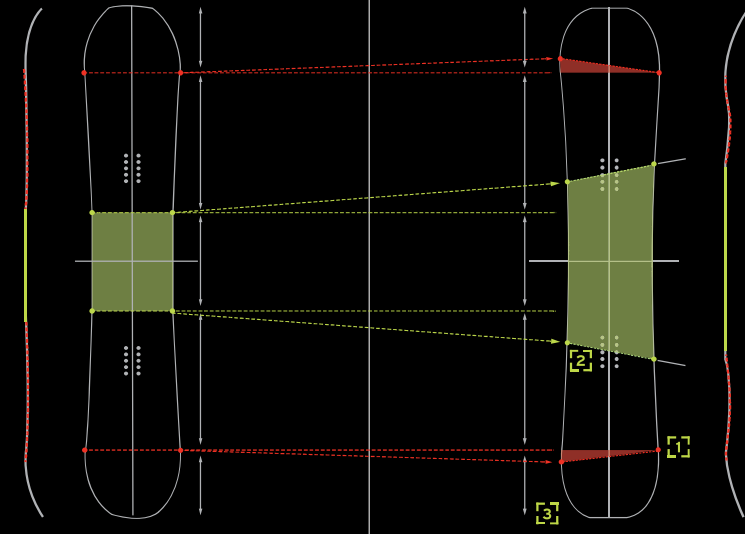

IT'S LIKE TUNING YOUR RIDE

## DCT 2.0

Hybrid Camber DCT is the right shape for you, if you are looking for a fun all-mountain shape, which is easy to ride. Playful and forgiving when riding at slow speed, but easy to control when going fast.

Choose the all-new Hybrid Camber DCT 2.0, if you are ready to take your riding to the next level. This shape automatically adapts to your riding style, from playful slopestyle performance to powerful carved turns.

**ENHANCED ROCKER**  
for smooth and catchfree ground trick performance.

**LARGER FLAT SECTION WITH STANCE OPTIMIZED CONTACT POINTS**  
for more speed and full board control.

**WEIGHT REDUCTION IN TIP & TAIL AREA**  
for less swing weight and increased agility.

## USAGE

**DCT** **DCT 2.0**
